

Theodosia Inlet · single-tile threat diagnostics (~10 × 10 km, CWH zone)

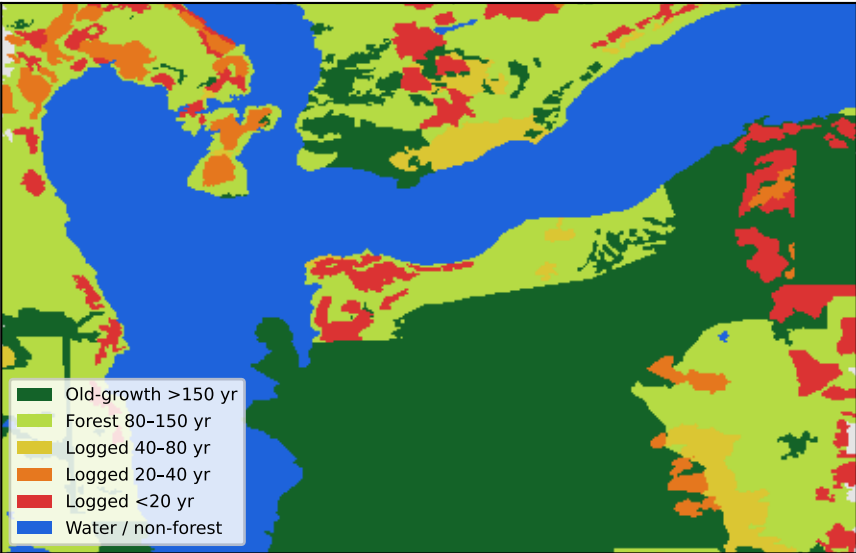

(a) Sentinel/AlphaEarth RGB context

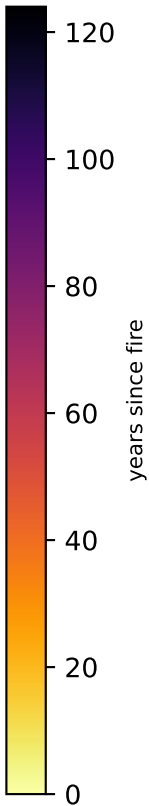

(b) Yew habitat probability (raw)
old-growth mass = 719 ha

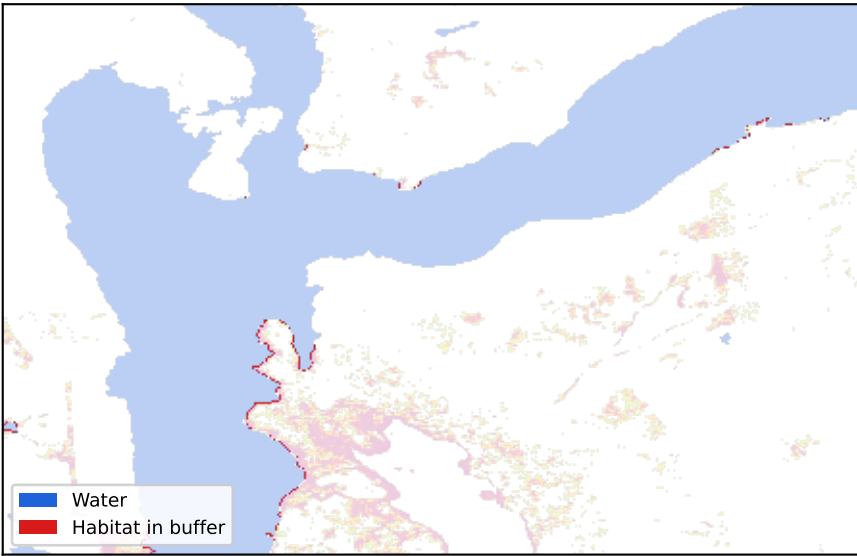

(c) VRI stand age (logging)
36% of tile logged <150 yr

(d) Historical fire perimeters
3 fire(s) intersect tile

(e) Riparian erosion risk (30 m buffer)
24 ha old-growth habitat at risk

(f) Protected areas
409 ha (64%) of habitat protected
